HUMAN LEVEL ARTIFICIAL INTELLIGENCE – ON A WAY TO SUPERINTELLIGENCE

Session moderator:
Witali L. Dunin-Barkowski,
Ph.D., D.Sc. (Physics , Math, Biology), Professor and Chair, Department of Neuro-Informatics, Center for Optical Neural Technologies, NIISI RAS
Chief Researcher, iPavlov Project @ MIPT; MIPT graduate of 1965
President-Founder, Russian Neural Network Society
Founder and Moderator, Weekly Working Sessions of Neuronet "Cauldron of Ideas" (since 2015)
E-mail: wldbar@gmail.com

OpenTalks.AI, Mail.ru, Moscow, February 7, 2018

Frontiers Research Topic

Toward and Beyond Human-Level AI

Topic Editors

Witali L Dunin-Barkowski
Department of Neuroinformatics, Center for Optical Neural Technologies, SRISA RAS Moscow, Russia

Alexander N Gorban
University of Leicester Leicester, United Kingdom

Timothy P. Lillicrap
Google (United States) Mountain View, United States

We welcome reviews, original research, and short communications on (but not limited to) the following subjects:
- system architectures of high-level AI;
- descriptions of concrete high-level AI systems and keynote subsystems;
- detailed methodology for creating high-level AI systems;
- papers composed by high-level AI systems;
- analyses of the limitations of current technologies and paradigms in approaching "human-level AI"

We will not limit the scope of the submissions to only successful attempts to implement human-level AI. However, the targeted aim of all papers in this Research Topic should coincide with its title.

We are PLANNING to launch:

Association of Russian AGI Laboratories

Ассоциация Российских лабораторий создания систем общего (сильного) искусственного интеллекта
